

KAUSHIK D

UX DESIGNER | Enterprise SaaS & Complex Systems

+91 91766 11530 | kaushikmdes6015@gmail.com | Portfolio | LinkedIn

UX Designer designing high-stakes, data-dense enterprise SaaS (cybersecurity, fintech, e-commerce) from 0-to-1 through production, with hands-on depth in design systems, RBAC, and multi-tenant architecture.

EXPERIENCE

UX Designer — Druva (Cybersecurity & Data Protection)

Jul 2024 – Present

- Handle UX for Druva's MSP experience, running design workshops, presenting design decisions to senior leadership and engineering, and shaping the interaction patterns other designers and engineers build on.
- Designed the complete operational dashboard for MSP partners, consolidating backup failures, storage usage, license status, and security risks into a single view. Cut a workflow that spanned **15–20 screens across separate pages and tenants down to 3**, speeding up how fast partners spot and triage at-risk accounts. Validated through partner research and iterative A/B testing.
- Designed Druva's first node-based interface: **an identity activity graph that maps a compromised identity and every action it took as nodes and edges**, so the information is easy to take in at a glance instead of row by row through a long table.
- Designed a Security Readiness Score widget with a custom graph visualization built from scratch, and a guided flow that lets admins configure commonly missed security features, such as MFA, SSO, and geofencing, **directly from that widget instead of hunting across multiple pages**, since leaving them unconfigured left accounts exposed with no safety net.
- Designed a scalable provisioning and access model, covering MSC-provisioned and Druva-provisioned paths, that lets partners self-serve product expansion, including future products, without filing a support ticket each time. This removed the ceiling that had been limiting MSC's customer growth.
- Designed the Education License model for Druva MSP, **helping onboard new educational institutions** with a 1:4 faculty-to-student ratio, license calculation, storage allocation, and billing automated end-to-end.

Freelance UX Designer

May 2023 – May 2024

AssetSprout — US-based Fintech SaaS, Product Designer

- Took AssetSprout from MVP to a production-ready platform, designing the bill-generation, reporting, and decision-support flows American wealth managers use daily.
- Ran user interviews and competitive analysis to design a performance dashboard surfacing the metrics wealth managers track most often.

IIT Kanpur — HMI Designer, Project Associate

- Ran on-site interviews, field visits, and stakeholder workshops to ground an autonomous vehicle's interface design in real operator behavior patterns.

Founding Product Designer — Harmoney (Y Combinator W22), Bond-Trading Web App, Fintech

May 2022 – Mar 2023

- Designed the end-to-end order-matching and closure flows for bond traders, using user testing and interviews to remove friction from the trade journey. This work supported a **6x rise in monthly traded volume**.
- Architected the design system and UX foundations across mobile and desktop from scratch as the sole founding designer, giving the product a consistent visual and interaction language as it scaled.
- Translated trader workflows and business requirements into wireframes, prototypes, and final UI alongside product and engineering.

Product Designer — Mason (SaaS for Shopify Sellers, E-commerce)

Feb 2021 – Apr 2022

- Won a **Shopify Commerce Award for Best App User Interface** by redesigning the ModeMagic app experience: reworked core flows, UI, and usability, contributing to **8x weekly active users (WAU)**.
- Designed the interaction patterns and interfaces for automation features, making complex e-commerce setup simple enough for sellers to self-serve.
- Ran competitive analysis and usability research to redesign onboarding and in-app guidance, helping new sellers ramp up faster.

PERSONAL PROJECT

Independent Product Builder — Theraxis (Clinic Management Platform for Child Therapy, Healthtech)

Self-Initiated

- Scoped and wrote the PRD for a multi-location clinic management platform (scheduling, billing, patient management, and role-based admin dashboards) to build a second design domain in healthtech, without a team defining scope upfront.
- Used Cursor to take it from requirements to a working, testable experience, then tested and iterated on the workflows and access model with real users.

SKILLS

Design: Enterprise UX, 0-to-1 product design, design systems, RBAC & multi-tenant architecture, interaction & visual design, prototyping, information architecture, MVP-to-production

Research: User interviews, usability testing, A/B testing, competitive analysis, stakeholder workshops

Tools: Figma, FigJam, Notion; AI-assisted prototyping (Cursor, Replit)

EDUCATION

Indian Institute of Technology, Delhi — Master of Design, Product Design

Jul 2018 – Aug 2020

Mantra Academy (Certification) — Design and Research

Jan 2017 – Oct 2017

Anna University, Chennai — B.E, Mechanical Engineering

Jul 2012 – Aug 2016
